

DAC System – Newsletter December 2017

[DAC System SA](#) is a supplier of innovative and unique IoT/Monitoring solution for RF-systems. With this Newsletter, we frequently inform our partners, operators and solution providers about the latest market and product developments.

DACS System on the CN Tower in Toronto

The Broadcast company owns over 200 transmitter stations in Canada. The system was delivered by Kathrein/SIRA and installed by Grundy Telcom Integration Inc.

DAC System commissioned by Pietro Casati in the transmitter room. The system records all VSWR and rf-power data, communicates with the IP network and the user. The Data Logger offers integrated Alarm Management with SNMP functionality. With every standard web browser the Cockpit gives fast and reliable control of the RF-System parameters.

DAC System at the IEEE BTS conference in Washington DC

DAC System could over 3 days present its Monitoring and Control System to US broadcasters, suppliers, partners and consultants.

The feedback was encouraging. The repack project is a great opportunity for the broadcaster and operator. With a little investment in the DACS Monitoring and Control System a future proof infrastructure is built for the next 30 years.
